

B&W reversal

1st developer

D19

Bleach

For 1 liter you need

10gr. Potassium Dichromate ($K_2Cr_2O_7$) and 10ml. of Sulfuric Acid 96 (H_2SO_4).

Note: Always add the Sulfuric Acid to water and never vice versa as it can explode! So its clever to ad first the 10gr. Potassium dichromate in 400ml warm water. When it's desolved add cold water till almost 1l. Add the Sulfuric Acid and ad water till 1 l.

Clear

For 1 liter you need

40gr. of Sodium Sulfite (Na_2SO_3)

2nd developer

any BW developer that will make the film turn black (you could use the first).

Fix

universal BW film/paper fixer will do.

Chemicals to make your own D19

for 1 liter

-Kodak Elon developing agent = metol	0.2	gram
-Sodium sulfite (Na_2SO_3)	90	gram
-Hydroginon ($C_6H_4(OH)_2$)	8	gram
-Sodium carbonate (Na_2CO_3)	52.5	gram
-Potassium bromide (KBr)	5	gram
